Bagasse Fuel Additive

SKU: AGN6200(25) | Range: 25 Kg in Bag

Bagasse has historically been used as a fuel in the sugar industry and although its calorific value is relatively low as compared with traditional fossil fuels there is no doubt that it constitutes a valuable energy source especially for countries that don t have significant availability of fuels and that are major sugar producers. Sugar cane Bagasse constitutes the fibrous matter that remains after sugarcane stalks are crushed to extract their juice. Our AGN6200 - BAGASSE FUEL ADDITIVE is a free-flowing powder treatment designed primarily as combustion catalyst for Bagasse which helps to reduce loss due to unburnt fuel resulting in improved combustion efficiency. It has an anti fouling agent that helps to keep heat transfer surfaces clean and thus improves the steam generation for same heat transfer area. It also softens the hard clinker and reducing the tendency of hard clinker formation thus helps in reducing the boiler maintenance provide ease in cleaning and increase the boiler availability for long term operation of the Sugar Industry. It promotes smoke free combustion at lower excess air levels resulting in improved fuel economy.

KEY PRODUCT FEATURES

- Reduces smoking
- Decrease unburned carbon
- Improves fuel economy
- Improves combustion
- Reduces soot
- Prevents Corrosion

TECHNICAL SPECIFICATIONS

Form: Powder
Packing: 25KG BAG
HSN: 38249022
Refer to Product Literature for Complete Specification
