Salmonella Test Kit

SKU: BSPP2 | Range: 5 Test Pack

Salmonella bacteria are zoonotic and can be transferred between humans and other animals. These are intestinal pathogens and are cause for many diseases viz. typhoid paratyphoid food poisoning etc. Classic typhoid fever is a serious and life-threatening infection which has a mortality approaching 20%. Cases of enteric fever almost always occur from the ingestion of contaminated food or water. These bacteria can survive for some time without a host for weeks outside a living body and they are not destroyed by freezing. They are frequently found in polluted water contamination from the excrement of carrier animals being particularly important. This organism enters through the digestive tract due to ingestion of contaminated food. The food infection is generally thru eating or handling contaminated raw or not properly cooked meat of cattle swine poultry fish etc. FDA has laid down mandatory testing norms to control risk of salmonella contamination in foodstuff like spices fish and eggs etc. BACTASLYDE is supplied in boxes of 5 along with the complete instructions set for a complete quantitative analysis of the contamination.

KEY PRODUCT FEATURES

- Microbiology Laboratory Not Required
- Can Be Used by Non-Technical People
- No Need for an Incubator
- Can Be Used at Site Very Effectively

TECHNICAL SPECIFICATIONS

Product Code: BSPP2
No of Tests: 5
Type: Presence / Absence
HSN: 90275090
Packing: Plastic Case
