Vibrio Test Kit

SKU: BSPP4 | Range: 5 Test Pack

Vibrio cholera is the causative agent of cholera that occurs naturally in water and transmitted primarily through faeces and sewage polluted drinking water and food. Earlier cholera was found in practically all major cities of the world especially in places with ineffective sanitation and where not much is done to prevent pollution of food and water. However after consistent vigilance by both National and International health authorities all over the world and with sanitary engineering of sewage disposal and water supplies the scourge of mankind has been brought under much control. But it is still found in fish and shellfish produce or leftover cooked grains. Marine and estuarine fishes are the most susceptible medium and it is usually most severe in marine culture and fish farms. BACTASLYDE is supplied in boxes of 5 along with the complete instructions set for a complete quantitative analysis of the contamination.

KEY PRODUCT FEATURES

- Microbiology Laboratory Not Required
- Can Be Used by Non-Technical People
- No Need for an Incubator
- Can Be Used at Site Very Effectively

TECHNICAL SPECIFICATIONS

Product Code: BSPP4
No of Tests: 5
Type: Presence / Absence
HSN: 90275090
Packing: Plastic Case
